Apache Server at ketron.club Port 443

Click on „dist\_Vxx.zip“ to download to your PC.  
Extract the ZIP-File and you get following Files:

```
> lib
  README.TXT
  REGISTRATION_Browser.jar
```

## App-Start

To start the RegistryBrowser double click in the file „Reistation\_Browser.jar“  
You need a JavaRuntime JRE to be installed for running this app.  
More information about JRE / Java: <https://www.azul.com/downloads/#zulu>

Although the app can read directly on you (via usb) mounted Ketron Keyborad, I recommend to copy your Registrations (Directory REGISTRATION) completely to you PC.

Click on Menu „File“ >> „Read REGISTRATION“ and navigate to your directory called „REGISTRATION“.  
Then click on the Button „READ Ketron REGISTRATION“ and your files will be loaded an the names an number will be parsed for better reading.

## Features

In the new Version (V20 onwards) the RegistrationBrowser calculates the MIDI-Events to be used for setting up Apps like MobileSheets to be send to your Keyboard, when loading a file in MobileSheets (example on next image).

BANK	REG Nr	MIDI_CC	MIDI_PC	Registration ...	Reg-Filename	Full Path
1	1	0	0	A Weisses Bl...	[001]A Weis...	/Users/klaus...
